

NOVEMBER 11, AT 10AM

SOLAR TOUR

HIGHLIGHTING SOLAR AS A HOME ENERGY SOURCE

Find out how Solar Energy - the POWER of the SUN -

- can be converted to electricity
- used to thermally heat water, pools and homes,
- power livestock watering systems,
- and more . . .

Homeowners are constantly seeking ways to reduce utility bills and save on taxes.

Sun City Energy Systems and Sustainable Green Country are teaming up to show how solar can help with both of these goals.

We'll start in the offices of Sun City to learn about the potential of solar, as well as the tax credits that make it as easy on yourpocketbook as it is light on the earth. Then we'll move on to a home in Broken Arrow that serves as an example of solar POWER in action - energy, hot water, and attic fans all operating on energy from the sun.

THE TOUR BEGINS

at Sun City Energy Systems,
6709G East 81st St., Tulsa, Ok

AND CONTINUES

In Broken Arrow, at
the featured Solar Home
